## Solar Power Generation Webinar

Solar Power Generation Webinar - a business model in Japan with Hideaki Jitsuyama, the director of FD Corporation, Japan as the guest speaker.

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. This energy can be used to generate electricity or be stored in batteries or thermal storage.

Solar energy is obtained from the sun's radiation and it can be converted to electricity or heat. It is freely available and thanks to advances in technology, we can now harness even more of the solar energy that is continuously available to us.

Our guest speaker introduced us to the new perspectives and benefits of solar power generation.
